## HIGHLIGHTS

Arauco generates renewable energy from forestry biomass and uses it in the production processes.

In Chile, Argentina and Uruguay, we are self-sufficient in net electricity consumption and we sell the surplus to the local grid.

5 cogeneration plants in Chile and 1 plant in Uruguay are registered under the Kyoto Protocol Clean Development Mechanism (CDM).

We expect MAPA will generate an additional surplus of 142MW available for the national grid.

# line 3 | MAPA

The investment for this project was approximately

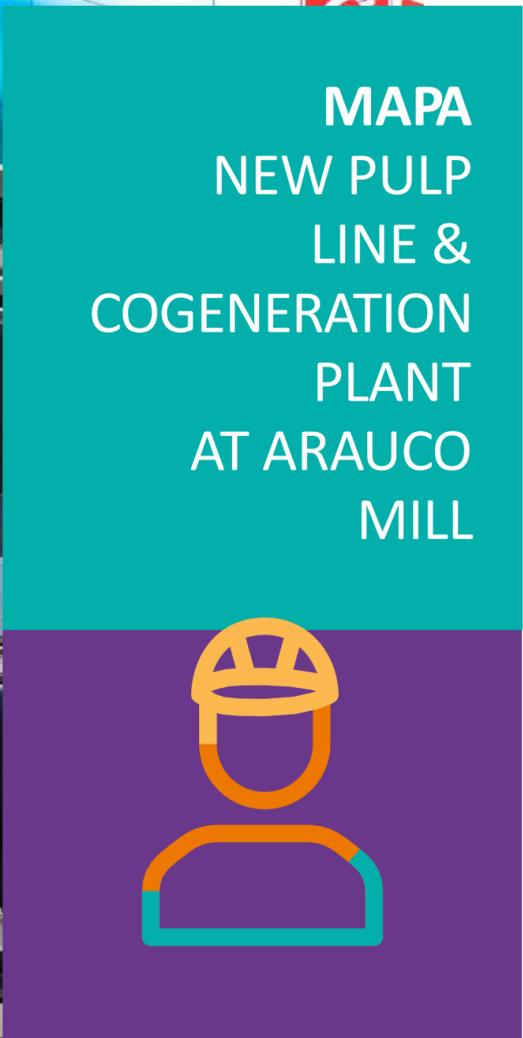

## US\$2.9 billion

The Project also considers the shut down of Arauco's line 1 of 290 th. tonnes of short fiber pulp (done on January 3rd 2022), and the construction of a cogeneration plant that we expect will generate a surplus of **142 MW** available for the national grid.

The background of the right-hand page is a photograph of the interior of the Arauco Mill (MAPA). It shows a large, modern industrial space with a high ceiling, glass railings, and workers in safety vests. A large, stylized logo is overlaid on the image. The logo is composed of three interlocking loops in teal, yellow, and red colors.

Modernization and Expansion of the Arauco Mill (MAPA) consisted in the construction of a third pulp line of 1.56 million tonnes of short fiber production capacity.

On December 29th, 2022, MAPA started feeding chips to the digester of Line 3, Initiating its ramp-up and process of pulp production. As a result, Line 3 produced its first bale on January 20th, 2023, expected to reach its full capacity in the short-term.

A vertical teal banner on the left side of the image contains the text "MAPA NEW PULP LINE & COGENERATION PLANT AT ARAUCO MILL" in white, uppercase letters. Below the text is a purple square containing a stylized orange and teal icon of a person wearing a hard hat.

Deloitte officially validated our carbon neutrality in 2020 for 2018, in 2021 for 2019 and in 2022 for 2020 (Method applied in accordance with the Deloitte Neutrality Protocol guidelines).

Price Waterhouse Coopers audited the entire estimation process of captures and storage in forestry products.

ARAUCO was the first company to successfully apply this protocol.
